CLOUDTRAIL

Cloud trail is used to monitor and track the user activity and API usage across the aws account.

- Create an S3 bucket to store CloudTrail logs. Ensure that you have the necessary permissions to create and write to the bucket.
- Click the "Create Trail" button.
- Enter a name for your trail and select the S3 bucket created in the setup steps.
- Choose the option to encrypt the logs with an AWS Key Management Service (KMS) key.
- Configure the trail settings as needed, including enabling log file validation.
- Review the settings and click "Create Trail" to create the trail.
- Navigate to the S3 bucket that you configured as the CloudTrail log location.
- Select a log file and open it using a text editor or the AWS Management Console.
- Review the log file to view the CloudTrail events captured by the trail.
- Use the filter and search features to find specific events or information.
