

AUTOSCALLING

- Autoscaling- in this task first enable automatic subnet association in subnets
- create an ec2 with httpd in it and check the status
- Once it shows active then create an image (AMI) out of that instance and create a CloudFormation Template after these steps go to Autoscaling and create LaunchConfig
- Select the AMI which you created and then create Autoscaling Groups.
- Your machines will start getting added and you put the load on the machines by using `(dd if=/dev/zero of=/dev/null)`
- now check the CPU graph as soon as it crosses 50% usage then the new machine will get created automatically.
